

SPECIES INDEX Vol 1 through Vol 34, issue No. 2

Introduction

Most of this index first appeared in 1976 as Part 1 of a larger index which was produced to accompany Volume 34, issue #3. It was originally the result of the exhaustive labors of Hilda and Elmer Baldwin.

Many names of species have been changed since 1976. Names no longer current are given in square brackets. Modern names are given in bold. Assume '**P.**' for **Primula** before every species' name. Extensive use has been made of Richards (2003) in bringing the names up-to-date.

var. = variety

ssp. = subspecies

Volume 11, issues 2, 3 and 4 were printed under one cover. In the index these are referred to as 11: 4: (then page #).

PD = Pictorial Dictionary

C = See the cover of the issue

P = A photograph (usually black-and-white) accompanies the text
